LETTER-SORTER MODEL 32120b

User manual

Published by Tbage & Rushork

Welcome.

If you are reading this, then you have chosen or been chosen by our nation to use the letter-sorter 32120b as part of your national employment.

The machine is a great addition to our workforce, and by using it you are contributing to our great society.

This user manual will guide you on your way to become a more efficient worker. The great people of Paska need you to sort their letters quickly and efficiently with no error.

Good luck, and glory to our nation.

Starting out

Your goal is to correctly sort each letter into it's respective category: Red; Green; Blue or Invalid. To sort a letter, guide the stamp over the letter with your **MOUSE,** and select the correct colour with **NUMBER KEYS** or **TAB**.

Invalid letters are ones that do not have:

- A correctly coloured seal.
- A correctly placed stamp or tracking label.

This letter, for example, recovered by your predecessor, has an **invalid seal,** and an **upside down postage stamp.** The previous candidate did not erase this disrespectful letter, and that is why you have a job.

If a letter has a tracking label, you must ensure to hold **SPACE** so that the letter can be processed as a tracked letter.

This will stamp the letter as before, but with a "T" on the Ink mark. Forgetting to do so is permitted, but doesn't look good for you. Accidentally stamping another letter without a tracking label is treason, and you will be charged appropriately for wasting company time and money.

As time goes on, you will receive letters quicker as they enter our system. Keep up, or get out. As you work, more complicated letters may enter the room and require a trained eye.

LETTERS MAY ARRIVE MISSING STAMPS, SEALS OR OTHER NECESSARY COMPONENTS. DO NOT ALLOW THEM TO ENTER THE SYSTEM!
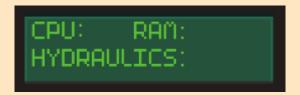

Your machine

All machines have flaws, and yours is not an exception. Make mistakes and your machine will falter, causing it to expend more resources to correct your mistakes.

Your machine has three main resources: RAM, CPU and Hydraulics. Ensure to keep all as low as possible during your time under our employment. You can keep track of these by looking at your resource monitor.

```
CPU:      RAM:
HYDRAULICS:
```

Cooling systems are installed, so your machine's resources will get better over time, but do not allow your desk to become cluttered with letters otherwise your machine will suffer too.

PASKA POST

Advanced letters

Sometimes our nation will supply you with tools you can use to help you complete your job.

Auto sort bomb - This letter will automatically sort all letters into their correct colour zones. It will not tracking-stamp letters, so you'll lose out on the bonus.

Colour suction bomb - This letter comes in 3 different colours corresponding to each letter colour. Stamp this incorrectly and it will disappear but stamp it with the same colour and ALL letters on the table will sort into that colour.

Summon bomb - This letter will summon anywhere from 25 - 60 letters in addition to existing ones. The chances are that you'll get a bomb. If you have a multiplier, you might want to use this letter to summon more!

Column sort bomb - This letter will automatically arrange all non-special letters into convenient colour-coordinated columns right before your eyes. It will not filter out the invalid ones!

Trash filter - This Letter will highlight all incorrect letters currently on the board, permanently. It will not sort them for you.

Use these tools wisely and sparingly, as they cost the company money.

Final words

As you complete your employment, you will constantly be assessed and awarded medals for your successes.

If you're looking for a promotion, ensure you collect all those medals, you won't be considered otherwise.

Do not disappoint the nation, make us proud.
